

OBJECTIVES OF SEIDENBERG PROGRAMS

Consistent with the Pace tradition, the Seidenberg School seeks to integrate theory and practice in its programs and research. The design, development, analysis, application, and management of current computing systems comprise the broad spectrum over which Seidenberg creates, interprets, criticizes, and applies knowledge, with strict attention to academic standards. Competency in foundation and methodologies allow for lifelong learning and effective response to the change inherent in the technology field.

The Seidenberg School is dedicated to serving students of all ages and backgrounds through educational programs that develop skills, enhance individual and community effectiveness, extend knowledge, and encourage critical understanding of culture. Personal, professional, and social responsibility are core considerations for every student.
