Public Health is an interdisciplinary field that combines the evaluation of the structural, behavioral, environmental and biological determinants of health with evidence-based policy development to protect and improve the health of individuals, families, communities, and populations, locally and globally. The Public Health Minor is designed for students interested in pursuing careers that focus on improving public health. Current Health Science, Environmental Studies & Science, Biology, and Psychology majors are particularly suited for this area of study as well as students from all majors with an interest in public health. This minor requires that students take five courses (a minimum of 15 credits) across at least TWO disciplines from the following list. At least ONE course should be a 300-level course.
